

Jorge Hernández

Backend Engineer | Go · Payments

Email: jorgelhd94@gmail.com

Linkedin/Github: @jorgelhd94

Location: Montevideo, Uruguay

EDUCATION

Computer Engineering

University of Ciego de Ávila

June 2019

LANGUAGES

Spanish (**native**)

English (**intermediate**)

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, SQL

Backend: gRPC, REST APIs, FastAPI, Django, Node.js

Databases: PostgreSQL, MySQL, Redis

Messaging: RabbitMQ, Async, Redis (task queues)

DevOps & Cloud: Docker, CI/CD, AWS, DigitalOcean

Practices: Git, Clean Architecture, DDD

Observability: Datadog, Grafana

Frontend: Next.js, React, Tailwind CSS

PROFILE

Backend-focused Software Engineer with 5+ years of experience building fintech, e-commerce, and business applications. Currently developing Go services for payment orchestration and asynchronous processing, with a focus on reliability and transaction consistency. Full-stack background in Python and TypeScript, delivering applications from requirements and system design through deployment and maintenance.

EXPERIENCE

RalioPay (2025 – Present) Backend Engineer

Banking-as-a-Service platform for bank accounts and cryptocurrency services.

- Develop Go services for payment orchestration.
- Implement fault-tolerant background processing with Async and Redis.
- Apply idempotency controls to support transaction consistency.

Main technologies: Go, PostgreSQL, Redis, Async

Kada International (2022 - 2025) Software Engineer (Python, React, PHP)

- Delivered client applications as sole or lead developer, from requirements and system design to deployment and maintenance.
- Worked directly with clients to translate business needs into production applications.
- Built logistics, price-comparison, and e-commerce solutions using Python, TypeScript, and PHP.

Projects & Experience

Kada International (2022 - 2025)

Software Engineer (Python, React, PHP)

- Kada Management Tool: Built a logistics application with Django and Next.js, including REST APIs, Selenium integrations, and automated PDF and Excel reports.
- Cuba Ofertas: Built a price-comparison platform with independent Python scraping services to aggregate and normalize supermarket listings. Added an AI shopping assistant that creates grocery lists based on a user's budget.
- Miimi Toys (Chile): Integrated Mercado Pago and custom WooCommerce plugins for a subscription-based toy store.
- AITO: Developed and deployed the company's WordPress website.

Main technologies: Python, Django, Next.js, TypeScript, PostgreSQL, Selenium, Docker, WooCommerce, DigitalOcean.

Freelancer (Jul 2023 – Oct 2023)

Full-stack Developer (TypeScript, Next.js)

- Built Mercadeo Marketplace for small businesses in Cuba using Next.js and Supabase.
- Implemented backend logic and REST services, and deployed the application on Vercel.

Main technologies: Next.js, Supabase, TypeScript, Tailwind CSS, Vercel.

Alta Gama (Nov 2020 – Apr 2023)

Software Engineer (React, Python, PHP)

- Developed and tested marketplace frontends for Swiss Cuban Charm and Altintin using Next.js and Tailwind CSS.
- Contributed to EICMA's billing system with Web2Py and Vue.js, automating invoice workflows and sales reporting.
- Built and deployed WordPress institutional websites for organizations under the Ministry of Agriculture.

Main technologies: Next.js, TypeScript, Python, Web2Py, Vue.js, WordPress, PHP, Tailwind CSS.
